

NGUYEN DANG DUONG

Software Engineer · Prague, CZ · BSc Software Development, graduating 2026

+420 720 072 937 · duongd973@gmail.com · github.com/Dang-Duong · linkedin.com/in/dang-duong-nguyen

Software engineer shipping AI-powered web & mobile products end-to-end. Finishing my BSc in Software Development in 2026. Currently training for my first Ironman.

EXPERIENCE

Yolk Studio	Aug 2025 – Present
Software Engineer	Full-time
• Took an AI document-extraction product to production with Gemini — smart input extraction, evidence checklists and an admin console for prompts, benchmarks, test sets and correction replay • Built secure MCP API access for AI agents on a lending platform — SHA-256-hashed keys, tenant-scoped row-level security and per-key rate limiting; closed two security-audit findings • Automated studio operations: n8n leave sync, a Slack bot, Chrome Web Store release CI and an automated React code-health scan on every PR across 3 repos • Core engineer on the rebuild of a UK mortgage-origination platform — 396 merged PRs in 3 months across underwriting decisions, lending-policy engine and funds release (React, TanStack Query, Express, Drizzle/Postgres, .NET) • Grew the platform test suite to ~1,200 tests, added CI gates for schema drift, dead code and formatting, and profiled large tables with the Event Timing API to keep interactions fast at 2,000 rows • Shipped fintech features in React Native for an investment app — QR wallet deposits, AML verification flows and biometric sessions • 1,100+ merged PRs across 10+ client products — web, mobile and backend	

Hostivio & Pultio	Jan 2025 – Present
Founding Engineer	Part-time
• Built AI guest-ID scanning — a vision LLM reads passports and ID cards into strict JSON schemas via zero-data-retention routing, images never stored; preceded by an on-device OCR version with MRZ check-digit validation in a Web Worker • Shipped the Hostivio iOS app (Expo / React Native) with EAS builds, OTA updates, push notifications and GitHub Actions CI • Automated Czech police foreign-guest registration (Ubyport) with batch submission, removing a manual legal chore for hosts • Built Stripe Connect payments — host onboarding, balances, payouts — and a direct booking engine with an embeddable widget • Cut homepage mobile LCP from 10.7 s by shrinking hero media from 1.35 MB to ~50 KB; standardised PostHog analytics, session replay and error tracking across apps • Built the Pultio point-of-sale back office — inventory, catalogue, statistics and EAN barcode restocking	

Curious what I've built? Let me know and I'll happily walk you through it.

SKILLS

AI & Automation	LLM integration (Gemini, OpenRouter vision) · MCP · Claude Code · n8n · GitHub Actions
Frontend	TypeScript · React · Next.js (App Router, SSR) · Vite · TanStack Query · Tailwind · shadcn/ui · GSAP
Mobile	React Native · Expo · EAS · Reanimated · Tamagui
Backend	Node / Express · NestJS · .NET / C# · PostgreSQL / Drizzle · Stripe
Quality	Playwright · Vitest / Jest · PostHog · Sentry

EDUCATION

Unicorn University, Prague — BSc Software Development	2024 – 2026 (graduating)
VŠE, Prague — Faculty of Informatics and Statistics	2023 – 2024
Gymnázium Ostrov — 8-year programme, Maturita	2015 – 2023

INTERESTS & LANGUAGES

Interests	Really into sport — recently started training for my first Ironman.
Languages	Czech (native) · English (fluent) · Vietnamese (intermediate)
